

AIR QUALITY OF METRO CITIES IN INDIA

PARTICULATE MATTER ₁₀

A day in

PARTICULATE MATTER

Particulate Matter having an aerodynamic diameter less than or equal to 10 μm . Particulate matter (PM) is a complex mixture of suspended solid and liquid particle in semi equilibrium with surrounding gases.

The air quality of different cities/towns is monitored by the respective NAAQS. The air quality has been categorized into four broad categories based on an Exceedence Factor (the ratio of annual mean concentration of a pollutant with that of a respective standard).

$$\text{EF} = \frac{\text{Observed annual mean concentration of PM}_{10}}{\text{Annual standard of PM}_{10}}$$

Critical pollution (C)	EF > 1.5
High pollution (H)	EF 1.0 - <1.5
Moderate pollution (M)	EF 0.5 - <1.0
Low pollution (L):	EF < 0.5
